Acute Psychiatric Ward, Pamela Youde Nethersole Eastern Hospital

Keywords:
Challenging situations
Quality and safety
Risks mitigation
Staff engagement
Capacity building
Successor development

Introduction
It is demanding for nurses to work at acute psychiatric setting. Nurses are exposed to many high risk patients and situations. However, many experienced nurses are absorbed to work at community setting. Author is facing a situation of quick capacity building of newly qualified nurses graduated from universities now.

Objectives
To ensure all nurses are trained on all quality and safety in patient care
To build up nurse competence in managing crisis
To build up successors with leadership in managing acute psychiatric setting

Methodology
Key indicators or high risks of acute psychiatric setting are identified. With supervisor’s support, author set up focus groups. Well organized department and ward-based on-site coaching are provided to target staffs within timeline

Result
Mid-point feedbacks and debriefings are provided to those staffs by their group supervisors or author. Newly qualified staffs are human with individuality, all staffs are equipped with positive feedbacks. All high risk errors were monitored with zero result. Some staffs were promoted to higher rank and selected to work at other challenging settings after training at this unit.
